

MEMONEW JERSEY STATE DEPARTMENT OF ENVIRONMENTAL PROTECTION

TO Ron Corcory
FROM George Smajda DATE October 20, 1978
SUBJECT DUANE MARINE CORPORATION I.D. 7216A

On September 28, a routine inspection of The Duane Marine facility was conducted. Taking part in the inspection were Ron Corcory, George Smajda (NJDEP) and Mr. Edward A. Lecarreux president of Duane Marine. Mr. Lecarreux explained that Duane deals primarily in oil spill cleanup, but recently the company has become interested in special waste disposal. Mr. Lecarreux said that special waste handling and disposal is what Duane wishes to deal with exclusively in the future.

The facility is located in Perth Amboy on the banks of the Arthur Kill. At present, little equipment is on site for processing special waste. Most of the equipment is geared for oil spill waste. A large diked tank is present on-site. Mr. Lecarreux explained that this tank is used for oil-water separation. Within the diked area are several smaller storage tanks containing solvent wastes. Also in the yard area are several areas where 55 gallon drums of chemical waste are stored. The areas are paved and no leakage was observed. Although if leaking were to occur there would be a good possibility that the waste would probably enter the Arthur Kill, as the drum storage areas are not diked. The remaining equipment are mobil units designed for oil-spill cleanup.
